

## CAPABILITIES STATEMENT

LowVoltageCabling.com specializes in structured cabling, network infrastructure, access control, security systems and telecom services. Our goal is to deliver a stress-free installation, whether it be new construction, transition from one location to another, or transitioning to a temporary space during remodeling. Our technicians are background checked and drug tested upon hiring and are trained to be network aware. We can cable and relocate an entire office and its associated network equipment while providing a working installation in a new location, a task that normally requires several different companies. This efficiency eliminates communication errors and facilitates a smooth transition between locations. We are well versed in staging temporary office spaces so that one location can be deconstructed simultaneously with the construction of a new location.
